PROJECTS

Tapsy (Rails, React, Redux)

[LIVE](#) | [Git Repo](#)

- Single-page app with a user activity feed that is customized for each React route, storing only relevant information in the application's state
- Utilizes Paperclip gem for file uploads and the AWS cloud server for secure, reliable photo storage, creating a more visually appealing and interactive UX
- Search bar that auto-suggests multiple sections of results, querying the database on each typed character

Block Out (JavaScript, EaselJS)

[LIVE](#) | [Git Repo](#)

- Puzzle game that detects collision between draggable HTML Canvas shapes
- Built with multiple game levels of increasing difficulty

Active Data (Ruby, SQL)

[Git Repo](#)

- Uses metaprogramming and object relational mapping to define association methods that query a database, allowing for quick and easy data manipulation through object instances that are tied to specific rows in a data table

SKILLS

Ruby Rails JavaScript(ES6) React.js Redux SQL HTML5 CSS3 Git jQuery

EDUCATION

App Academy (New York, NY)

August 2016 - November 2016
